Quantum cascade lasers facilitate infrared spectroscopy of liquids, e.g. in process analytics.

Compact quantum cascade laser modules of the Fraunhofer IAF can be customized to address various applications.

© Fraunhofer IAF

The quantum cascade lasers developed at Fraunhofer IAF cover a wavelength range from 4 – 11 µm and offer a broad spectral tuning range. Therefore they open completely new ways for infrared spectroscopy: from stand-off detection of explosives to time-dependent measurements of chemical reactions in aqueous solutions, the quantum cascade lasers offer a wide range of applications.

**Features**

- Wavelength range from 4 – 11 µm
- Spectrally broad tuneable (≥ 30 % of central wavelength)
- Typical output power 50 – 100 mW
- Linewidth < 2 cm⁻¹ (pulsed)
- Compact, robust modules
- Collimated output beam

**Applications**

- Detection of hazardous substances
- Infrared spectroscopy of liquids
- Continuous measurements in in- and online process control
- Food safety control
- Medical applications
- Environmental analysis
